

REDSKY

**OVERSEER NOTES:
THE SENTIENTS OF DEMA**

ARCHIVISTS

Harbinger ██████:

Regrettably, the male individual known as “The Archivist” continues to elude Tier Valnine through Tier Provadens of hull meta surveillance. It is to this end that this committee requests requisition of Tier Optico resources to continue pursuit. The identity of The Archivist perplexes demographic databases despite optimal lineage tracing and forensic extrapolation. Theories vary. The 6 most plausible theories surmise that “The Archivist” is either an alias, multiple generations of individuals related genetically, or ██████. Magus Aymund maintains that the last of these circumstances is the most likely, as it explains away The Archivist’s immortality and reappearance at will. A minor point of general frustration exists for the hull teams attempting to find direct references to The Archivist when he shares an agnomen with every individual of Sentient Species “Eltayan.” Maguses Levin, Oldur, Laval, and Nalon reiterated that this naming was likely intentional on his part.

The impact of The Archivist on Sentient Species “Eltayan” is exceptional. Doctrine Zenyecrot is a novel thought structure considering ██████. Formation of Item 5E “Scrudac” and accompanying sociological traditions alone has produced vast troves of culturally significant music, oral mythology, and other such objects. The music is being adapted for cultural syncretism with musical motifs from past cycles by Maguses Zimer and Filk. The most notable pieces will need to be extracted for preservation or ██████ recorded the Attenuated Galleries of the Class Igo through Ed Continuum Depository. Presence of The Archivist at focal political, religious, and social events in the history of Sentient Species “Eltayan” is an unfortunate development. The guiding hand of an individual not accountable to ██████ is prohibited. His presence at turning points in the

Etherean-Aegic wars of Sentient Species “Eltayan” protohistory were particularly disruptive to the efforts of Maguses Hinlin and Verhovun, who already had competing schema on how militarization of society might affect cohesion. While the full scale of The Archivist’s resources and capabilities is still pending determination, his transposition of individuals from the inconsequential to the historical is cause for caution flagging ██████ to the endorsement of Maguses Li and Mor ██████ higher powers than this committee.

Capture or elimination of The Archivist has been complicated by the rigid standing policy of only using field equipment that falls within acceptable margins bounding the technology endemic to Cycle ██████. To quote the parameters: “If subject cultures cannot conceive of equipment, [equipment] must not be seen.” Use of mobile platform microswarms or genetic identification autoinjections was disqualified for the unacceptable risk they pose to the integrity of ██████ ship, but adjacent technologies could have revealed The Archivist’s identity and safehouse[s] centuries ago.

Per affidavits related to the longstanding controversy around this administration’s equipment policy, to breach the standing prohibition would require either reseeded of Ultima-grade technology within untapped ruin networks not limited to 67 ps/x, ██████, or in the worst-case, ██████. This committee as well as Maguses Gemisan, Zimov, Lyber, Cotavia, Maleri, Baytes, Carpezyn, Sheli, Swanwik, and Klarck et al unanimously feel Prospero would not find any of these options acceptable at any point before ██████. Several of the aforementioned personnel have penned passionate rebuttals to the metaethical foundations which currently serve to justify the boundary

FEATHERFOLK

Harbinger Rodinburi:

Attached are the requested records of the previous iterations of biomes and associated cultures located at the area now directly beneath B-612 Stellar-Stableton. Sentient Species “Usundi” has begun Category III societal growth in the region around the southeast interior sea, endemically referred to as The Gilded States. Cultural adaptation to the extremely high average temperature of the Type 16M Desert terrain closest to B-612 is promising. Several subcultures engaged in commerce, tribal territorial disputes, or semi-nomadic raiding have developed between Cycle Time Log: 3 to Log: 7895. Cultural syncretism is expected to reach its greatest extent upon Usundi discovery of Eldertech Repository Zeta at coordinates [REDACTED].

Concentration of ruins from previous cycles is strongest in the parthax unit grid of terrain located in the regional vicinity of the Sunbleak Wastes. The concerns of Maguses Ocorafer, Emerik, and Pierss about endemic archeological extrapolation from the ruins are noted, and the risk is indeed quite high. Extensive city and temple remnants from Sentient Species “Huwawa,” Sentient Species “Jocastor,” Sentient Species [REDACTED], and Sentient Species “Mehvu” especially hint at previous biome iterations. There are ten generations of ocean floor tomb complexes on top of mountain range 22X alone. One can imagine how problematic it would be to have Sentient Species “Usundi” scholars speculating about an unknown water-breathing Sentient Species building in such a strange place. Several tomb-raiding expeditions led by Sentient Species “Usundi” have nearly uncovered outposts 8 and 11.

Given sufficient time to properly discover, excavate, and reverse-engineer Eldertech from the Wastes at a minimum estimated rate of 3.2

UPT, Sentient Species “Usundi” could reach Category V civilization within an above-average timeframe. However, 1.005 quintillion Simulacrum models determine that society in the Sunbleak Wastes is near statistically certain to collapse. Sentient Species “Usundi” is not estimated to have the societal cohesion to adapt to Variables 161.80, 186, 282 et al. Meetings to discuss ramifications of this remain tense. Magus Lukos expressed a general hatred of sand despite the efforts of Harbinger Hirburrt to create such a large desert biome.

Of particular concern is the continued survival and propagation of Non[?]sentient Species LV426-27182 “Strigoi,” an unfortunate consequence of the period when [REDACTED] racing landships debt owed to Magus Miler.

Suggestions about conditions in the settlements of The Auric, Panacea, and Hollowfalls by Maguses Krombi, Roanhurs, Meyvil, Kard, Opcinsen, and Jolen are attached. Maguses Rumauro, Bruks, and Irkmin’s dissemination of Reanimation Virus 4 in Midlands jungles will scale up to the final epoch, leaving time for rain-forest wildlife to be archived by Maguses Kamerun and Boroës. Magus Kamerun is especially intrigued by bioluminescence. Maguses Paolin and Mkafri’s proposal for additional draconian life outside of Parime was appreciated, but not implementable on this cycle’s accelerated time frame. Factoring in these doomed territorial models, this committee’s recommended course of action to continue monitoring and limited intervention remains the same. As Begetter Myurs reiterates in the Simulacrum, Sentient Species “Usundi” civilization’s struggles before [REDACTED] of the hull are just as meaningful as whatever Prospero believes their kind’s ultimate destination may be.

HUMANS

Harbingers Luwus and Tholkin:

The concerns brought to this committee's attention by Maguses Aldmen, Kerryh, Bajur, Wilis, Daleni, and Ujold can no longer be ignored regarding their peer. Magus Calibana has taken an admirable interest in the civilizational progression of Sentient Species "Homa," but her vocal criticism is affecting crew cohesion.

It is not, however, without merit. The introduction of several thousand mother flora and fauna species from the Continuum Depository into the Light Plains region has admittedly invigorated what has been deemed species nostalgia among the field teams for an era time has almost forgotten. The legacy of many Sentient Species "Homa" dialects having direct influences from several reconstructed Ur-languages by The Warden and Magus Beturzen have also given a slighter level of meaningfulness to what was overwhelmingly considered an ill-advised species inclusion. In response to Magus Calibana, this committee notes the awful record of Sentient Species "Homa" in past cycles, principally the [REDACTED], the runaway cascade of disasters seen in Time Log [REDACTED], or the calamity still being enumerated from Cycle [REDACTED]

[REDACTED] Hammeltin-Renelhd's Transcataclysm Principle [REDACTED]

[REDACTED] of the entire inner hull. The Solar Hegemony's current practices provide a semi-novel synthesis of documented political and social species norms. This makes their ongoing wars of expansion, exploitation, and eradication even more stunning. Or, as the Sentient Species "Homa" team composed of Maguses Orwul, Tawood, Zamyetin, Hobes, Kolins, Browyn, Rouzow, Huksli, Abneht, and Radbur-

ree concluded: "tragically natural."

Consequently, Magus Calibana's emphatic concerns about the Solar Hegemony's goal of activating the Warden Towers as core religious tenets of Doctrine Sola are relevant, most obviously because the Towers [REDACTED]. Maguses Adams, Vahneget, Greoning, Wehdin, Zgalzi, and Brachet have produced a joint statement noting that while they are no strangers to humor, the concept of situational irony has unequivocally been taken too far. To date, the effect this pursuit of Warden Tower activation has had on Sentient Species "Homa's" progress can be measured in 37 million ARD, multiplied by the hundreds of thousands killed in the faith's name. This committee feels the zealous impulse shown once again brings up questions of long-term viability for Sentient Species "Homa" in the wider realms of creation, majority of active personnel notwithstanding.

Magus Calibana may find Sentient Species "Homa" worth preserving in their flawed state, but her peers have doubts. May we never forget what began this transit of the cosmos to begin with.

NIGHTRIDERS

Harbingers Dauzin, Ruhden and Grosmin:

The worldbuilding of a new culture is always an exciting prospect. The testing of [redacted] or more Sentient Species concepts is underway in pentenary decks or Simulacrum modelling by [redacted] Maguses and Begetter's imaginations. Here, for the inaugural introduction of Sentient Species "Monturyrn" into a cycle, the results are nearly optimal. This committee believes the Class 3 Civilizations developing across the Moon Realms provide a stable model of transition from nomadic to urban societal norm progression. Sentient Species "Monturyrn" displays strong gravitation to independent critical thinking and decentralized power structures, likely due to the [redacted] Magus Byutnur and Sentient Species "Kasini" [redacted] long echoes.

This committee lauds the trait planning of Sentient Species "Monturyrn" as exceptionally suited to seeding in the event habitable planets in the next system are low-light or tidally locked, a likelihood estimated at [redacted] per the models. Magus Shaan's skill in accounting for nocturnal hunters was on display. We must learn from the errors of past low-light Ur Eden seedings [redacted] doomed to their fates in retrospect to Magus Kasandra's prophetic warnings.

The concerns of Sentient Species "Monturyrn's" notably violent conflicts with Sentient Species "Homa" have been flagged by Maguses Loo and Gheymin, who have sought to preserve cultural mythology and folklore alluding to the array of Sentient Species "Monturyrn's" gods. This committee counters with the record of confrontation between various Sentient Species. There is no shortage of such dynamics of conflict spanning heroic, imperial, and declining ages in history, as noted by Magus Juudsen. The fates of the many Sentient Species "Monturyrn" individ-

uals facing injury in battle, generational enslavement by the Solar Hegemony, and cultural admixture with the other major cultural groups would shift growth [redacted], factoring in the comparative sociological demographics of Cycle [redacted]. This would only be the case if Cycle [redacted] was left to elapse the standard length of time of other Cycle Logs, which [redacted] indicate[s] it will not given proximity to new planet within [redacted] i/12sx.

This committee is unsure of the intention of Magus Gaeanax in regard to their curious proposed ending for Cycle [redacted], principally [redacted] lan guages of Magus Changhs's building of said tower on arrival, [redacted] of Magus Nyvin's concerns a ringworld would be unstable. Regardless, Sentient Species "Monturyrn's" various religious sects from Doctrine "Path of the Moon" would be a trove of data on consequences of contact or return of [redacted]. This trial proposal has the endorsement of Maguses Speelperg and Ridli, if only for the sense of wonder it would instill in observers. Before the cycle's conclusion, the entire spiritual and historical fabric of Sentient Species "Monturyrn" will face an epochal change at [redacted]. Preparations are already underway for the exaggerated artificial red-shifting for B-612 Stellar-Stableton and [redacted], assuming survivors.

SPORESPAWN

Harbinger Zerling:

As per previous correspondence, this committee urgently requests additional resources and personnel be allocated to Zones U1-U260 Substrata, colloquially referred to by in-hull Sentient Species in past cycles as ██████, "What Lies Below" in Runtok, ██████, currently "Thalkast" in Qet, and "The Hive Halls" in Mundane.

Observation and Maintenance Team assignment turnover rates for the Thalkast have broken records for the third consecutive cycle. Reasons cited include lack of amenities and extraordinarily heightened risk of maiming and death from underground terrorfauna. Ongoing efforts to document both original iterations and evolved terrorfauna are being handled by Maguses Lem, Enrikes, Zapcosci, Gigur, and Heldin.

Possible discovery of Outposts 4 and 10 by major Sentient Species "Qet" cultural groups is being exacerbated by subfactions' continuous unearthing of dormant entities, several of which appear to predate existing Cycle Time Log by measure of frightening numbers of millennia. Previous requests for any information on file for ██████, ██████, entity or entities sleeping in Zone U-124 "The Panopticon," and whatever can be learned of "The Darkweaver" remain Tier Aeon priorities. This committee reiterates the need for Prospero to further distance evolutionary parameters away from the sentient mega entities developed by distant predecessors. Containment measures across ██████ or more isolation chambers are in critical disrepair or suffer outright failure of containment integrity. Teams sent in to cull wider contamination of entities have been deactivated due to high casualties or outright disappearance. Asset recovery efforts fall to Maguses Lazwiz and Vulfe.

Ruins of past civilizations are extensive. Eldertech saturation rates remain acceptable. Thorough tectonic remodeling has cycled in not only subterranean ruins, but those that once existed on the surface in Cycles ██████, unfortunately ██████, and possibly ██████. Feral Sentient Species "Qet" tribes endure in the lower sectors of the Thalkast, as well as devolved remnant bands of Sentient Species "Ikto" in Zone U57, Sentient Species "Altana" on the banks of the Substrata Sea 5, ██████, and several troglodytic offshoots of Sentient Species "Homa" that appear to be rediscovering rudimentary technology and cultural thinking at the bottom of ██████. These offshoots have been flagged by Maguses Vern, Travis, Wels and Kordweynur as potential successor species to Sentient Species "Homa" given enough time to re-evolve.

Infrastructure from past Outposts ██████ ██████ chance to be salvaged, though priority must remain at bringing Zones back under acceptable parameters of control. Assessment of worth at attempts to reactivate ship decks ██████ through ██████ far beneath the Thalkast remain inconclusive. These spaces are archaic, long abandoned to prioritize resources to other more critical decks. Possible dangers in these mythical lost decks that have lacked any supervision for many crew generations are unsettling.

WAKEWALKERS

Harbingers Delrei and Campel:

This administration spends worlds of energy to create viable lands at the expense of seas. Cycle [REDACTED] presents a unique opportunity with such a large quantity of water in the southwestern Zones 270-983, referred to in the three main Khottan language groups as the Midnight Isles. The scale of this endeavor has been reevaluated by the terrasculpting teams at the World Tree led by Maguses Geldur, Rahbinzen, Tebber, and Bancs. Oceanic life has remained a promising prospect for seeding into [REDACTED], as well as viable planetoids and moons with liquid water, ethane, and methane. The lack of even rudimentary single cellular life on all of the aquatic celestial bodies encountered remains a profound mystery of our journey. Why has no planet with Ur Eden conditions produced a biological bounty? The need for intelligence compartmentalization is understandable, though this committee still requests further context if available so as to adjust parameters accordingly.

Magus Zanderzen's enthusiastic incorporation of crustacean animal species in a future cycle has thus been approved, though the sheer volume of variants proposed considering Buchur-Lalli F-12 Principle means biome saturation will be subject to review. It is this potential to seed aquatic ecosystems that also partly justified the macro-life. Counterpoint: if the Maguses exert a level of influence on each region's culture akin to the lesser deities several societies pray to, then Maguses Sooburai, Ebraams, and Mahrtene are instituting the policies of vengeful gods. This committee does not feel it justified to sustain producing continuously evolving megafauna simply because Sentient Species "Varakwai" persist in killing them at industrial scale.

[REDACTED] The presence of the Depth Rigs among Sentient Species "Varakwai's" Clan Kahr is an unfortunate development unanticipated when the initial parameters of the megafauna's production were set. We are still investigating how an endemic group of infiltrators [REDACTED] compromised the World Tree. Aid from one of the crew, however unlikely, cannot be ruled out. This exaggerated prioritization of macrolife will be noted in the archives for administrative review at the conclusion of the Cycle Log.

Presence of remnant member of surviving Sentient Species [REDACTED] beneath Hiremai Island is no longer in dispute. While sweeps of the inner hull recorded in the last Cycle Log appeared conclusive, presence of Sentient Species [REDACTED] to the shape of the Hiremai's culture.

Conditions at the World Tree remain in a state of flux. The decision to let multiple Nonsentient Species from past cycles compete in anarchic selections in the territory continues to produce unprecedented data. Reseeding of Cycle [REDACTED] life after the upcoming hull purge will be at scale and methodical. The proposed visions for these future worlds remain contested by Harbingers Bernsgak and Klaton, whose amicable feud remains as strong as ever. Entrances 4, 8, 15, 16, 23, and [REDACTED] at the World Tree leading to exterior ship compartments must be audited and refurbished for security integrity at the conclusion of this cycle to prevent further breaching of outer hull by endemic fauna.
